the processor is coupled to a display wherein two-dimensional image information acquired from at least one of the first and second arrays can be displayed.

- 74. (original) An ultrasonic catheter according to claim 69 wherein the processor is coupled to a display and the processor is programmed to form a three-dimensional reconstruction and wherein the three-dimensional reconstruction is displayed.
- 75. (original) An ultrasonic catheter according to claim 1 wherein the first and second ultrasonic transducer arrays are coupled to a transmit beamformer and a receive beamformer, and a processor and a display are coupled to the transmit and receive beamformers, wherein the processor is programmed to (1) acquire two-dimensional image information in a first image plane generated by the first array upon excitation by the transmit beamformer, (2) acquire two-dimensional image information in a second image plane generated by the second array upon excitation by the transmit beamformer, and (3) selectively display the two-dimensional image information acquired from at least one of the first or second arrays.
- (new) An ultrasonic catheter according to claim 1 wherein the body comprises a catheter body.
- 77. (cancelled)
- (new) An ultrasonic catheter according to claim 1 wherein the body comprises a
  maximum diameter about equal to or less than 4mm.
- (new) An ultrasonic catheter according to claim 78 wherein the body comprises a diameter that is about 1-4 mm.
